

Student Billing Operations Platform

Type: Multitenant Web application

Tenants: Student Organizations of Bukidnon State University

Description:

The Student Billing Operations Platform is a multitenant web application designed for student organizations to manage collections while ensuring financial transparency and accountability. Each organization operates in a secure environment for independent tracking of billing activities. The platform allows bulk imports of student records and customizable billing categories, such as membership fees and event contributions. Authorized users can manually record payments or import data, associated with students and billing categories, to maintain accurate financial records. It features reporting and analytics tools to generate detailed summaries, outstanding balance reports, and payment histories, filtered by various criteria and exportable for audits. Additional features include role-based access control, audit logs, data validation, and a responsive interface accessible on any device. This platform centralizes billing operations and enhances financial tracking for student organizations.

Features:

- *Multi-Tenant Setup* - Each organization (college club, society, class, etc.) gets its own workspace or “tenant.” Data is isolated per tenant: one organization cannot see another’s data.
- *Student Billing Management* - System can regulate the student profiles as well as their bills paid, billing type, amount due, and payment status.
- *Receipt Generation* - Generate payment receipt digitally and be sent to the student’s email address.
- *Payment Tracking* - Allows payment tracking of dues: fully paid and incomplete bills. This allows tracking of payments, tailored for accounting purposes.
- *Role-Based Access Control (RBAC)* - Allows admins to assign roles and privileges to specific users to ensure security and accountability.
- *Reports* - Generate attendance reports per student, per event, or per date range.

User Roles and Responsibilities:

Role	Description	Responsibilities
Admin	System-level administrator overseeing all organizations on the platform.	• Manage system settings and organization tenants • Create, update, or deactivate organization accounts • Define global roles and permissions • Monitor financial data integrity and audit logs • Ensure compliance with platform policies
